

Matrix E1

Référence interne :

CARACTERISTIQUES:

The Matrix E1 combines compactness and efficiency, offering extended travel within a reduced footprint, ideal for machining large parts. Its thermosymmetric structure with Thermal Shield ensures precision and stability without costly cooling systems. Preassembled, it minimizes installation costs. Equipped with direct drive motors, versatile accessories, and high adaptability, it performs effectively on materials like steel and aluminum. Advanced lubrication and optimized chip management lower operating costs and simplify maintenance.
